

The **GTAC Global View Capital Management Risk-Based Portfolios** employ the science of global tactical asset allocation utilized by large institutions. The GTAC portfolios offer five risk-based models designed to offer both a defensive strategy in severe market downturns and an offensive strategy in up-trending markets. In rising markets, each model seeks to tilt the portfolio to the top performing asset classes available through mutual funds on the platform: U.S., developed international, and emerging markets, equities, precious metals and real estate. In falling markets, the portfolio has a targeted maximum drawdown, providing defensive protection by moving to cash, short-term bond and/or U.S. Treasury mutual funds.

Each risk-based model utilizes a proprietary, quantitative, rules-based discipline that combines an algorithmic signal on the underlying funds with momentum and relative strength indicators. A comprehensive set of rules identifies those allocation tilts.

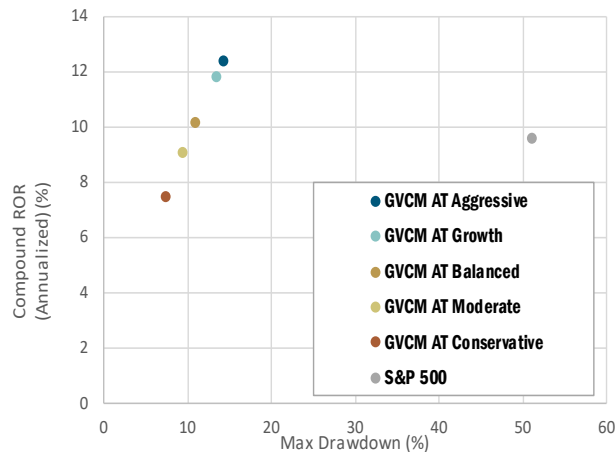

KEY FEATURES

- Global tactical asset allocation
- Targeted draw-downs to manage severe market declines
- Management Fee = 0.40%

Return on \$100,000 (Hypothetical)

ABOUT THE MANAGER

Global View Capital Management, LTD (GVCM) is an SEC-registered Investment Advisory firm located in Milwaukee, WI, offering Separately Managed Accounts (SMAs) to individual investors, financial professionals and institutions.

The cornerstone of GVCM's expertise is technical analysis. Founded on the principle that "a great offense is a stellar defense," GVCM employs the science of global tactical management, relative strength, momentum and numerous other tools to analyze market data to deliver actionable insights. These tools cut through the clutter of day-to-day market action and headline noise, and attempt to identify meaningful patterns in daily price movements.

Since 1999, its research arm, AdvisorGuide LLC, tracks over 12,000 securities on a daily basis, to include, indexes, mutual funds, exchange-traded funds (ETFs) and variable sub-accounts. Its comprehensive investment research and analysis governs the various models and strategies offered across both the U.S. and Canada.

Statistics	Annual Return	Annual Std. Deviation	Sharpe Ratio	Alpha	Beta	Correlation	Max Drawdown

IMPORTANT MODEL PORTFOLIO DISCLOSURES:

Performance results represent actual performance from 10/1/2014 to present. From 5/1/2003-10/1/2014, performance results represented were achieved through the retroactive application of a model that was designed with the benefit of hindsight. The signals used to generate the performance results are from the actual long-term trend signals from AdvisorGuide (AG), the research firm of GVCM. AG has been generating these signals since 1999 using the same algorithms. GVCM utilizes the signals as guidance in determining a proprietary combination of technical, quantitative and economic indicators to specific exchanged traded funds and mutual funds. Buys and Sells may have or may have not occurred on the exact dates shown and do not necessarily reflect transactions applied. No current or prospective client should assume that the future performance of any specific investment or investment strategy (including the investments and/or investment strategies recommended by the financial adviser), will be profitable or equal to past performance levels. All investment strategies have the potential for profit or loss. The information herein is from sources believed to be reliable; however, its completeness and/or accuracy cannot be guaranteed. The performance information and data presented herein are received at calendar month-end.

Changes in equity markets, bond markets, commodities and currencies interest rates, exchange rates, economic conditions, political conditions and other factors may influence a strategy's performance. There is no guarantee that a tactically managed portfolio will outperform a passively managed portfolio or target date fund. All investment strategies have the potential for profit or loss.

Economic factors, market conditions, and investment strategies will affect the performance of any portfolio and there are no assurances that it will match or outperform any particular benchmark or index. The model and actual volatility of the indexes referenced in this investment profile may be materially different from the model and performance volatility of any client's managed portfolio. Indexes are unmanaged and an investor cannot invest in an index directly. Changes in investment strategies selected, investor contributions or withdrawals may materially alter the performance, strategy and results of your portfolio. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will be profitable for a client's portfolio.
